

ValueNet is an application that allows a bank to send electronic instructions to commercial property-valuers, enabling these service providers to complete property valuations systematically.

Benefits for Service Providers (Valuers):

- Standardised input – valuations are completed on a uniform system that guides the process.
- Direct integration – completed valuation data is passed directly into bank systems.
- Removal of email – valuation reports are part of the application hence removing the need to email separately.
- Performance tracking – service provider scorecards create competition, which drives an increase in valuation quality.

Target Market:

- Instructions are sent electronically from the bank to the service provider.
- Increased & transparent control of allocations – this is done systematically.
- Analytics – pre-defined reports come standard, but the MI suite can be enhanced or amended in accordance with client specification.
- Enhanced accounting features – invoices and statements are generated automatically

Should you require additional details relating to ValueNet, our team is on hand to assist. Please email us at info@e4.co.za.

We look forward to hearing from you.
